Software Developer

As a Frontend Developer at Netcompany-Intrasoft, I specialize in building enterprise-grade applications using Angular, TypeScript, HTML, and CSS. My responsibilities include designing and implementing Micro Frontend (MFE) architecture, developing and integrating complex screens, and ensuring high-quality code through unit and integration testing. I work within an Agile environment, collaborating with cross-functional teams to deliver scalable, maintainable, and performant solutions aligned with project goals and timelines.

Software Developer

As a Software Developer, my responsibilities encompassed a broad range of crucial tasks within a banking environment. I employed my expertise in Angular, HTML, CSS, .NET, C#. I provided ongoing support to bank employees, addressing their queries and issues related to the software, and offering guidance. I collaborated with cross-functional teams, including business analysts and project managers, to gather requirements, propose technical solutions, and deliver high-quality software solutions within defined timelines and budgets.

Full Stack Developer

As a Full Stack Developer, I fulfilled a dual role as both a Frontend and Backend developer, effectively managing responsibilities in both areas. On the frontend side, I leveraged my expertise in Angular, HTML, and CSS to design and implement user-friendly interfaces that provided a seamless and intuitive user experience. Employing principles of Responsive Web Design, I ensured that the applications were accessible and visually appealing across various devices and screen sizes. Meanwhile, on the backend, I harnessed the power of Java Spring Boot to develop robust and secure server-side applications.

Bachelor in Computer Science

9th Coding Bootcamp (AFDEmp) / HePIS-CEPIS

BSc in Public Administration and Political Science

Docker & Kubernetes: The Practical Guide [2023 Edition]

JSON Web Token (JWT) with Spring Security and Angular

Spring & Hibernate for Beginners (includes Spring Boot)
